Education

Oregon State University **June 2023 – December 2026**
B.S. Computer Science *3.61 GPA, Corvallis, OR*

Experience

Intel Corporation **May 2026 – Present**
Data Engineer Intern *Hillsboro, OR*

- Developed AI workflows to automate Power BI Project modifications, including JSON configurations, UI components, and report standardization, bringing PBIX reports to 60% completion against enterprise development guidelines.
- Supported enterprise ERP migration from SAP HANA to Databricks and Microsoft Fabric, using SQL and Power BI to validate financial reporting data, maintain data integrity, and modernize enterprise analytics infrastructure.
- Developed and standardized Power BI dashboards using SQL, DAX, and Power Query for enterprise spending and headcount reporting, supporting 1,000+ internal Intel users through consistent data models and reporting interfaces.
- Collaborated with multinational engineering teams and hosted daily technical syncs for 50+ developers, coordinating SQL, Python, and Power BI development efforts, tracking technical blockers, and aligning reporting deliverables.

Daimler Truck North America **March 2025 – July 2025**
Software Engineer Intern *Portland, OR*

- Deployed a SQL-driven Power BI dashboard to monitor 1,000+ active truck build statuses, production timelines, and tariff-related supply chain disruptions, enabling data-driven prioritization and operational decision-making.
- Developed Python and Power Automate AI workflows to aggregate and summarize operational data from 5 sources, automating email routing to 30+ stakeholders and improving cross-functional communication across international teams.
- Cataloged and structured enterprise operational data within ETL pipelines, standardizing data schema, metadata, and transformation logic to support reliable data retrieval and integration with LLM-powered AI services at scale.
- Supported enterprise API migration during the Mercedes-Benz separation by testing and validating 25+ data flows and system integrations, ensuring data integrity, software compatibility, and continuity of critical reporting workflows.

Oregon State University **January 2026 – April 2026**
Data Analyst Developer *Corvallis, OR*

- Developed 10+ SQL-backed Power BI dashboards and paginated reports using Microsoft Fabric, migrating legacy Tableau reports and optimizing SQL queries to improve data accuracy, performance, and automated reporting workflows.
- Validated data models through QA testing and developed UI/UX wireframes, technical documentation, and training materials for faculty and staff, supporting AI-assisted analytics adoption and accessible self-service reporting.

Oregon State University **November 2024 – May 2026**
Web Experience Developer *Corvallis, OR*

- Supported enterprise Drupal 7-to-10 migration through software testing QA, and validating ADA/WCAG accessibility and web functionality across platforms serving 30,000+ students, and staff while maintaining consistent user experiences.
- Developed interactive website tours and reusable UI components using HTML, CSS, JavaScript, analyzing accessibility metrics to improve UX and reduce support requests by 30% through self-service documentation and navigation.

Bluekube **April 2022 – January 2023**
Web Developer *Westlake Village, CA*

- Developed and maintained multi-brand e-commerce websites using Shopify, WordPress, HTML, CSS, and JavaScript, resolving UI issues and optimizing website performance and page-load efficiency across multiple storefronts.
- Designed and implemented product pages and A/B testing experiments, collaborating with developers on UI/UX improvements to enhance usability, customer engagement, and conversion optimization through iterative design testing.

Top Project

Using AI to Improve Oregon Supply Chains | *React, Vite, Python, SQL* **September 2025 – July 2026**

* Collaborated with local farmers, the Oregon Department of Agriculture, and OSU agricultural research leaders to identify supply chain inefficiencies, research transportation challenges, and develop data-driven logistics solutions for small farms.
* Developed an AI-powered logistics platform integrating the OpenAI API for LLM-generated route summaries and Mapbox API for live route visualizations, distance calculations, and cost optimization.

Technical Skills

Programming Languages: Python, SQL, HTML, CSS, JavaScript, C++
Technologies/Frameworks: Git, Github, Linux/Unix, CI/CD, React, .NET, Google Cloud Platform, Google Firebase, Azure, Visual Studio, Figma, Node, Express, RESTful APIs, PyTorch, Power BI, Tableau
